Propiolate Esters and Oxalates

Nordmann Fine Chemicals key intermediate series.

Now offering Methyl / Ethyl Propiolate & Dimethyl Oxalate.

The highly versatile propiolate esters are widely used in organic synthesis in various conjugate addition reactions. The lithium derivatives can also be easily generated to do alkynylation additions. These reagents will also undergo region and stereospecific halohydrogenation reactions.

Dimethyl Oxalate is a versatile building block widely used in Alkylation reactions and is also a common chelating agent in various processes. More recently it has also been used in direct alkylation fuel cells.

Propiolate Esters and Oxalates

Nordmann Fine Chemicals are specialists in the supply of multiple kilo quantities of fine chemicals, intermediates and organic building blocks to the Pharma, Generics, CRO API manufacturing, Agrochemical, Photographic, Flavour & Fragrance & Electronics industries.
